# INDUSTRY SELLING PRICE INDEXES 1956-59

(1956 = 100)

Reference Paper

Published by Authority of
The Honourable George Hees, Minister of Trade and Commerce

January, 1961 8204-501 Digitized by the Internet Archive in 2024 with funding from University of Toronto

## PREFACE

This publication introduces a new system of monthly wholesale price indexes covering the period 1956 to 1959. Also included is an explanatory text concerning concepts and methods which is intended to assist in the interpretation and appropriate use of the indexes.

It is believed that these indexes will meet the majority of the needs of users who have found series available at present inadequate for their purposes. In addition, it is hoped that the indexes will stimulate more widespread use of wholesale price indexes as instruments of economic analysis. In this connection, criticisms and suggestions for improvement are welcomed.

The material for this publication was prepared in the Wholesale Frices Section of the Prices Division.

WALTER E. DUFFET, Dominion Statistician.

This publication presents a new system of wholesale price indexes entitled Industry Selling Price Indexes. For each of nearly one hundred manufacturing industries, these indexes express the current composite price of shipments of commodities of Canadian manufacture as a per cent of the base year (1956) price equivalent which is taken as 100.0 per cent.

The Industry Selling Price Indexes are compiled and presented according to the Standard Industrial Classification. This is the fundamental distinction between them and previously published wholesale indexes, which are classified by commodity. However, the adoption of this system of classification does not signify that the new industrially classified series are intended to displace the commodity classified indexes. On the contrary, neither the one nor the other form of classification alone appears capable of serving all the purposes required of wholesale indexes. Accordingly, present plans call for refining and broadening existing commodity series in the belief that they have their place, and that indexes based on both systems of classification should be regarded as complementary. However, it will be some time before the revision of the present commodity indexes will be completed, therefore, the General Wholesale Index and its components will continue to be published along with current Industry Selling Price Indexes in the monthly publication "Prices and Price Indexes" (Catalogue No. 52-002).

The Industry Selling Frice Indexes presented here refer exclusively to the manufacturing industries and accordingly include only prices of domestically manufactured products. Also, in the price collection operations, commodity definitions and terms of sale are specified in sufficient detail to give distinctive emphasis to price conditions and practices characteristic of each manufacturing industry. For these reasons the indexes are not intended to measure price movements in channels of distribution subsequent to manufacturers' sales nor, obviously, do they include prices of imported products except, of course, to the extent that imported materials are ingredients of domestically manufactured products. Although they are confined to the Manufacturing Division, these indexes are based on a much larger number of firms and prices than is the case with the General Wholesale Index. The Industry Selling Price Indexes include approximately 3000 quotations reported by some 1600 respondents.

In the calculation of these indexes, primary emphasis is placed on critical examination and informed evaluation of prices. This has resulted in some progress in detecting commodity discontinuities in price series and has given rise to improved techniques for evaluating their effects on price. Also, as a result of increasing the number of price quotations collected, the number and variety of commodity price statistics available to serve the diverse needs of users have been enlarged. A selection of these commodity indexes is contained in this publication. It should be understood that a commodity index under the industry classification system measures price movement of that commodity with respect to sales made by a particular designated industry, and is not a consolidation of price movements of the commodity based on prices from all industries where it is sold.

The matter of revising wholesale price indexes has been under consideration for some time. Both the conceptual basis and prewar weights of the General Wholesale Index have been of concern over recent years to users of the indexes as well as to the Dominion Bureau of Statistics. With the growing number of users and increasing diversity of purposes to be served, demand for broadening and clarifying the conceptual basis of wholesale indexes has intensified. Current interest is high in statistics which relate to enterprises and classifications of enterprises primarily, and secondly to commodities. Users have indicated that they want more precisely based indexes which relate to industries, particularly manufacturing industries, augmented by commodity series for more manufactured goods. Thus it is clear that the present commodity classified General Wholesale Index and its component series, based on a "chief component material" criterion, are unsatisfactory for many current economic purposes. Industry Selling Price Indexes, which relate to the Standard Industrial Classification and which refer to a single and precise level of distribution, are intended to meet these needs.

# II - RATIONALE OF INDUSTRIALLY CLASSIFIED INDEXES

In recent years the range and depth of analytical uses of a variety of statistics classified according to industrial divisions have been increasing, and it is fundamental to this development that the Standard Industrial Classification be generally and uniformly applied. This common approach to classification is essential to the historically uniform and systematic assembly of complex statistical series such as input-output tables, indexes of industrial production and the national accounts. These series incorporate various primary statistics into a general analytical framework to which indexes of manufacturers' prices are now added.

The statistical system of the Dominion Bureau of Statistics in return provides a useful framework for prices analysis. Through general application of the Standard Industrial Classification, statistics of industries are organized on a uniform basis. Thus information on relationships between a variety of series and industries can be useful in assessing price tendencies, not only with reference to their immediate effects on other elements of the economy but also in regard to the probable direction and extent of their repercussions. For example, inputoutput statistics may help cast some light on the subsequent course and impact of price changes which occur at the primary industrial level. Conversely, this framework of statistics makes it feasible to relate other economic factors to price.

<sup>&</sup>lt;sup>1</sup> A brief outline of this classification system is given in Part IV of this text.

The Manufacturing Division has been chosen for inaugurating the new system, principally because price indexes appear to be most needed in this area. Manufacturing accounts for about one quarter of Gross Domestic Product, and by this standard it is the largest single industrial division. In addition, manufacturers are informed and frequent users of statistics. Their complex business operations require them to keep detailed records, from which meaning-

ful statistical data can be extracted without undue difficulty; and availability of data is of particular concern with a new project. Finally, the structure of the Manufacturing Division makes possible the use of small samples of establishments, since more than 80 per cent on average of total value of Factory Shipments is accounted for by less than 15 per cent of the number of establishments in the division.

#### III - OUTLINE OF INDUSTRY SELLING PRICE INDEXES

Indexes introduced in this publication are weighted according to the value of shipments in 1953 as reported to the Industry and Merchandising Division of the Dominion Bureau of Statistics.

The year 1953 was chosen as the base weighting period of the index because it was the most recent year for which data were available at the time and because it met the usual requisites for a base year. Among the industries of the Manufacturing Division, there were no significant imbalances in the usual relationship of their respective shipments values. Supplies of materials and manpower in manufacturing seemed to be adequate; the inflationary effects of the Korean conflict had largely subsided; in fact some levelling off in production occurred in the latter part of the year. Finally, the level of activity in 1953 gave promise of a satisfactory perspective for a number of years.

Though it is more usual to fix only one year for both weighting and reference periods, practical considerations occasionally do not permit it. In this case 1956 was selected as the base reference period equalling 100. This decision was taken on grounds that with initial price collection concentrated in the period 1957-59 it would be most difficult to collect accurate prices prior to January 1956. Even when prices are collected on a current basis it requires considerable time and careful scrutiny to detect and correct for discontinuities and other inconsistencies. It was felt that such difficulties, compounded by insufficient data on historical prices and obsolete

models, would outweigh the benefits to be derived from indexes for earlier years. Furthermore it was thought that it would impose too large a burden on respondents to pursue price histories prior to 1956.

Original plans called for an index for every industry in the Manufacturing Division. Technical difficulties limited the number now being published to approximately one hundred, but eventually virtually all industries will be covered. In addition to the industry indexes, some one hundred and seventy commodity indexes are presented in this publication. Additional commodity indexes may be obtained on request, either free or for a nominal charge depending on the amount of work required. These commodity indexes will meet needs calling for individual series discussed above, and will also serve users who wish to compile aggregate indexes consisting of ingredients of their own choice. No aggregate index for the Manufacturing Division will be published for reasons discussed below. Nor are there any plans at present to publish average prices (as opposed to price relatives). In choosing price indicators, emphasis was placed on achieving representativeness of change in price. Accordingly, respondents were requested to provide specifications and terms of sale peculiar to the bulk of their own operations. As a result, prices reported differ from firm to firm depending on differences in commodity descriptions and terms of sale. Consequently there are many cases where a meaningful average price cannot be calculated from available price data.

#### IV - NATURE OF STATISTICS OF MANUFACTURING DIVISION

Some familiarity with the organization of the statistics on which the Industry Selling Price Indexes weighting system is based, is a prerequisite to an adequate understanding of these indexes.

The Standard Industrial Classification is a system for classifying "establishments", a term which in general is used to refer to the smallest and therefore the most homogeneous unit capable of providing data on the basic elements of input and output required for industrial statistics. The simplest grouping made of statistical reports submitted by establishments is the "industry" classification such as the Cotton Thread Industry. A consolidation of a small number of closely related industries is called a "sub-group"; for example, the Cotton Goods sub-group which includes the industry mentioned above plus two others. A "major group" such as Textile Mills is a broader and consequently less homogeneous classification. Finally, the most comprehensive aggregation used in the organization of industry statistics is called the "division". The Manufacturing Division is one of eleven divisional classifications which together cover all divisions of economic activity.

The Manufacturing Division as provided for in the 1948 Standard Industrial Classification manual<sup>2</sup> is composed of 17 major groups, 18 sub-groups, and 132 industries.<sup>3</sup> That is the framework for classifying some 38,000 establishments counted in a recent annual census of manufacturing establishments.

Whether an establishment is classified to one industry or another depends upon the type of commodities it manufactures and the relative importance of each commodity in the total output of that establishment. There are about 3,500 commodities or

 $<sup>^{2}</sup>$  A revised Standard Industrial Classification manual has been compiled recently.

 $<sup>^{\</sup>rm 3}$  In practice some of these classifications have been sub-divided further.

commodity groups for which the annual Census of Industry shows separate values. Few establishments manufacture only one commodity and consequently virtually every industry classification contains establishments which produce a subsidiary range of commodities not primarily identified with that classification. For example, meat is a distinguishing product of the Slaughtering and Meat Packing Industry, but soap is also produced in that industry as a secondary activity. Establishments primarily producing soap have their own distinctive industry.

Output of the Manufacturing Division results from the integrated activities of industries engaged in three classes of manufacturing process:

- (a) Primary goods producing industries
- (b) Intermediate goods producing industries
- (c) Final goods producing industries

As the names suggest, these classes are dependent on, or complementary to, each other, because of the technological principles commonly applied throughout the Manufacturing Division, which usually result in a limited number of processes being carried out in any one particular plant or establishment. The result of such specialization on the output of the division, which is largely composed of complex goods requiring a number and variety of processes, is that most products pass through two or more industries before being shipped out of the division. Such inter-relationship of industries has an important bearing on the concept of "aggregate" as it relates

to the value of factory shipments. This consideration is in turn fundamental to the nature of price index numbers associated with factory shipments values.

For each of the Standard Industrial Classification industries, the Census of Industry produces an annual "value of factory shipments" total which includes the full value of output of each industry regardless of the destination of output. In this concept of value it is irrelevant that part of the total of one industry is counted again as output of another to which the first industry supplies raw material. For example, castings counted as outputs of the Iron Castings Industry may show up again as components of machines which are outputs of the Industrial Machinery Industry. However, both the castings and machines cannot have value independent of each other at the same time, though to add the output of one to the other assumes that they have. Thus the sum of these industry totals overstates the final value of shipments flowing out of the Manufacturing Division. Logically, at finer levels of aggregation this double reckoning is correspondingly less, because the simpler the classification the less likelihood of inter-shipments between component establishments. For example, two establishments producing the same product will not use each other's output as their own inputs. Accordingly, there is less duplication in sub-groups than in related major groups, and for most practical purposes the user may assume that the duplication which occurs in the shipments of an individual industry is insignificant.

#### V - PROPERTIES OF INDUSTRY SELLING PRICE INDEXES

It is clear that the characteristics of factory shipments described above will influence indexes weighted by such values. The weights employed in the Industry Selling Price Indexes are based on shipments of manufacturing establishments, without deductions of shipments made to establishments also classified to the Manufacturing Division, and hence contain an element of duplication of the type described above. Though duplication is not believed to be of consequence for the industry indexes published, users who are interested in combining the published series to produce indexes at higher levels of aggregation should be aware of the possibility of such duplication. The seriousness of duplication depends on the degree of intershipments between the industries for which an aggregation is proposed. In some cases the effect can be insignificant, or even non-existent as would be the case if two unrelated industries were aggregated, for example, the Slaughtering and Meat Packing Industry, and the Carbonated Beverages Industry. On the other hand, duplication would be of some consequence in a total including the Carbonated Beverages Industry and the Sugar Refining Industry, a case where one industry obtains a substantial part of its inputs from the output of the other. The same qualifications apply to the

addition of certain commodity indexes based on published weights. A total of flour and bread indexes would involve substantial duplication but the sum of the indexes of men's suits and women's dresses would be free of such effects. However, the problem is not as relevant to commodities because they are generally used as individual relatives and weighting of the kind under discussion is not involved.

Before deciding on a basis of weights for the Industry Selling Price Indexes, careful consideration was given to other alternatives, principally that system which deletes inter-industry shipments from total shipments to obtain "final" shipments. Obviously, it is a long and expensive undertaking to construct a system of final output weights. Furthermore, when the job is completed many of the primary and intermediate commodities and industries will have been excluded from the framework, thus ignoring important and sensitive aspects of price behaviour in Canada. For these and other such reasons weights used in the calculation of indexes released in this publication are based on the total values of shipments of firms classified to an industry.

#### VI - NATURE OF THE DATA

Industry Selling Price Indexes are calculated in the base-weighted form (Laspeyres formula). The comprehensive expression of the calculations is:

$$\frac{\sum \frac{F_1}{P_0} (P_0 Q_0)}{\sum P_0 Q_0} \times 100 = Index$$

In the above formula the P's denote prices and Q's quantities. The subscripts "1" and "O" refer to current and base periods respectively. Thus the weights are fixed for an extended period of time during which indexes at all points in time are comparable with one another. No adjustment is made for monthly variations in quantity of factory shipments.

To appreciate the nature of the price ingredients of the Industry Selling Price Indexes it is useful to distinguish between "seller's price" and "purchaser's price". In a transaction involving one purchaser there are frequently two or more sellers; for example, the producer of the commodity involved and the common carrier who delivers the goods. Industry Selling Price Indexes are measures of prices received by manufacturers for goods they sell and consequently elements of purchaser's price which accrue to other industries do not belong in price quotations entering into the indexes. Thus, freight, insurance and taxes are excluded from price quotations on conceptual grounds and price collection routines emphasize this fact. However, respondents in certain industries and commodities in their day-to-day business activities price their goods on a "delivered" basis. In other words the price they quote is on the basis of delivery of the goods at the purchaser's plant. In these cases, editing processes have taken this situation into account and estimates of f.o.b. plant prices are made. Thus the resultant indexes are calculated to reflect sellers' prices and accordingly the component series will be more comparable than if they contained freight, insurance and taxes, which vary both from industry to industry and from time to time.

Prices for the Industry Selling Price Indexes are collected by mail on a monthly basis. The price collection form (reproduced in appendix c) calls for the price which applies on the fifteenth of the month in question. When the fifteenth is not a business day or when no sales have taken place on that day, the respondent is asked to quote the price which applies to the last preceding sale.

The price reporting form in use specifies that quotations reflect actual transaction prices, or, in other words, the prices actually paid. However, despite considerable effort to prevent it, some list or nominal prices find their way into the indexes. Though this problem continues it is diminishing, thanks to the conscientious efforts on the part of many respondents. The effect of such prices on indexes will vary from series to series, and although such prices probably do not seriously affect trend they may conceal timing of turning points in transaction prices.

The price reporting form does not, however, indicate any preference between prices quoted for new orders taken on the fifteenth and prices which apply to goods shipped on that day. Here it is assumed that the respondent will report a price that relates to new orders. An assessment of the validity of this assumption is now under way and early returns appear to justify it. In any case, the difference between the two can only be important in industries where time lag between taking orders and filling them is significant. In such cases quotations based on new orders will be more sensitive to current market conditions and therefore more appropriate for a wide range of price analyses. On the other hand the price associated with filled orders is more consistent with Census of Industry shipments values which, of course, are records of orders filled. This aspect of the prices used has some relevance when the indexes are used for deflation purposes.

Industry Selling Price Indexes are intended to measure change in prices of commodities undistorted by anomalies arising out of changes in the commodity itself or the terms of sale under which it is sold. Thus, if a producer changes his product or terms of sale in any way, the price equivalent of such change should be taken into account in assessing the price relationship of the two price quotations bridging the change. Essential to this evaluation is a knowledge of the particulars of the inconsistency in the physical specifications and terms of sale to which the two consecutive and otherwise comparable price quotations apply. This information becomes available when respondents report prices according to adequately specific definitions or specifications. Consequently, manufacturers are requested to provide the particulars of any change they make in their basis of reporting and otherwise to adhere strictly to the specifications and other instructions written on the reporting schedule.

Nor are these indexes intended to show average price change due to variations in volume of sales as opposed to changes in individual actual prices. From time to time price data of this kind are uncovered during editing. For example, a respondent may report average unit prices for a range of terms of sale under which a certain commodity is sold. Such an average will be affected by change from one month to the next in the proportional representation of the various terms of sale included in the range from which the average unit prices are calculated. Accordingly these averages can show small month-to-month changes even though constituent prices remain unchanged and for this reason are objectionable and are not used except as a stop-gap measure.

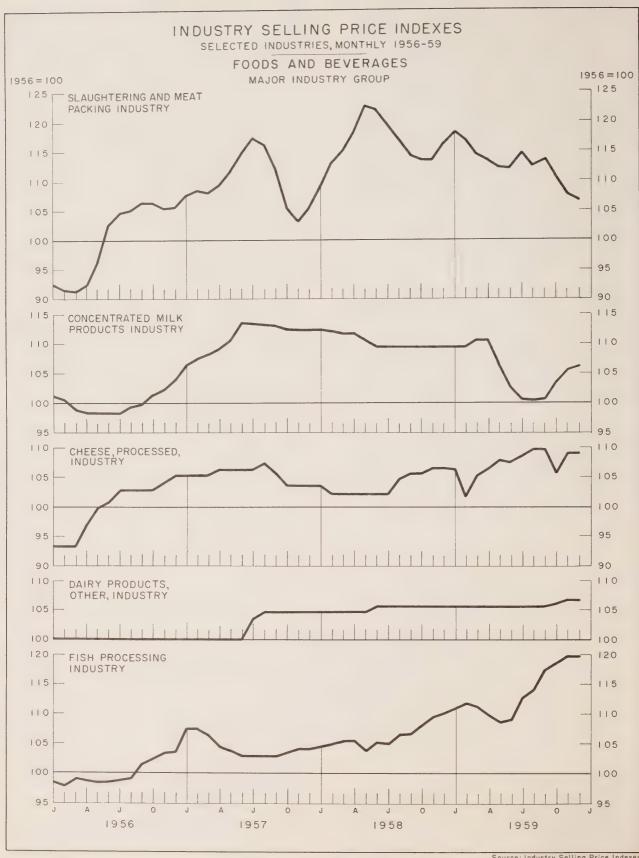

Obviously, the representativeness of price indicators has an important bearing on the validity of these indexes. The selection of commodities whose prices are included in the indexes was accomplished in two stages. Initially, those commodities and groups of commodities which in total accounted for 75 per cent of the shipments of their respective industries in the base year were picked to form the

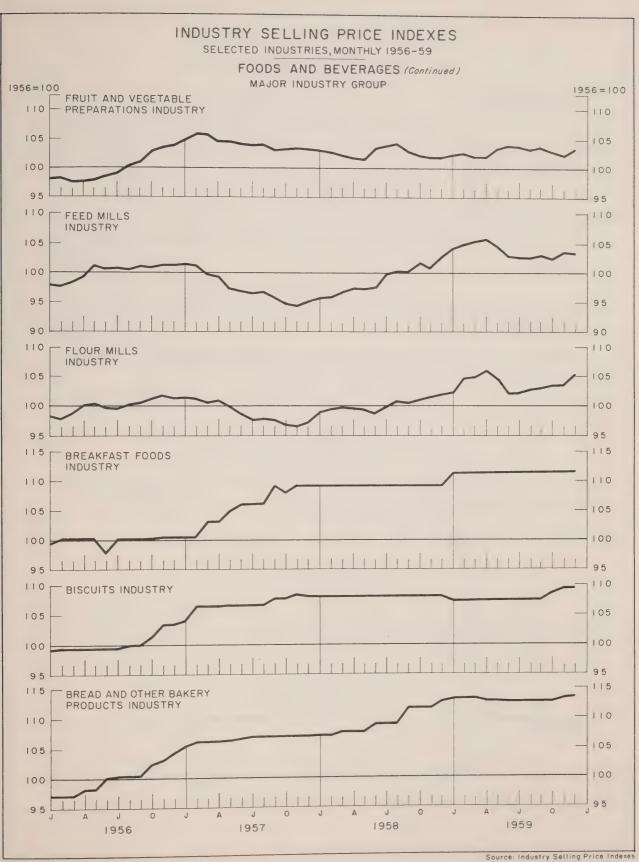

basic pricing framework. This framework will stay fixed for the duration of the indexes. The commodity groups included in this framework were taken from schedules on which manufacturers reported their annual shipments values and consequently are general classifications for the range of related products of which they are composed. Therefore, a further selection process was necessary to determine the indentities of the specific products included in such classifications. Accordingly, firms selected to provide prices were consulted and gave their advice in this connection, choosing products to act as price indicators according to suggested criteria of their importance at the time. Year-to-year developments since have brought about a number of changes; products originally suggested have disappeared from the market and others have replaced them in the pricing programme. Thus, whether a new indicator is as representative as was the one it replaces warrants consideration. There is also a further question concerning the stability of the representativeness of the indicators originally chosen in cases where manufacturers introduce new products which compete with existing indicators. Consequently it has become necessary to contact respondents to investigate these developments so that conditions of inadequate representativeness may be corrected. In this regard, present plans call for continuing this investigation, staggering it in a manner that will ensure that each indicator will not go several years without verification.

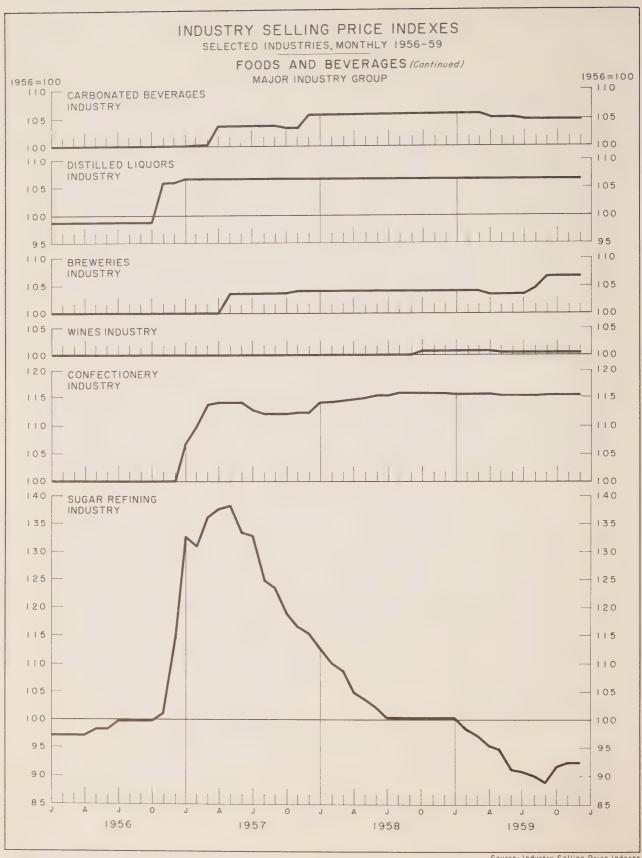

Switching from a price indicator matching one description to another with a different description, as models and varieties of products change in the market, necessitates comparing the price of a different product with that of its predecessor. A reconciliation of these differences may be pursued

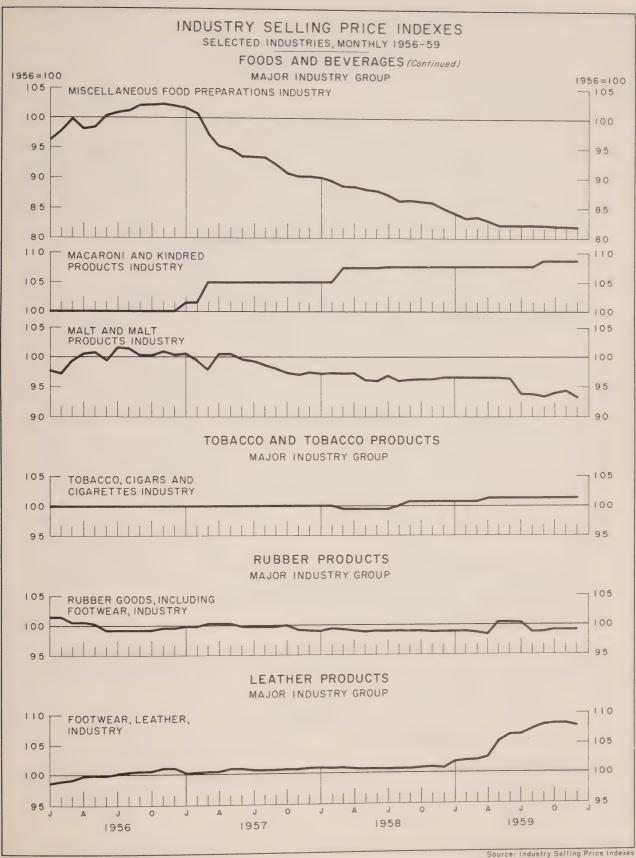

through a relationship between characteristics common to the two products through which their prices may be equated. The problem is approached by assessing the inputs of the two, and from their relationship estimating their price equivalent. In detail, this is accomplished by comparing direct costs of labour and materials valued at the same level of price and technological development for both products. In other words the relative quantities of direct labour and material inputs provide the standard of assessing a price equivalent for the new product. The analogy is restricted to quantities of labour and materials inputs rather than all inputs because of the number of circumstances in which manufacturers do not record other costs on an individual commodity basis. This technique has been applied in many but not all cases of substitution in 1958 and with increasing frequency thereafter. Prior to 1958 there were several methods applied which were largely subjective. The form on which data are collected for applying this technique is reproduced in Appendix C.

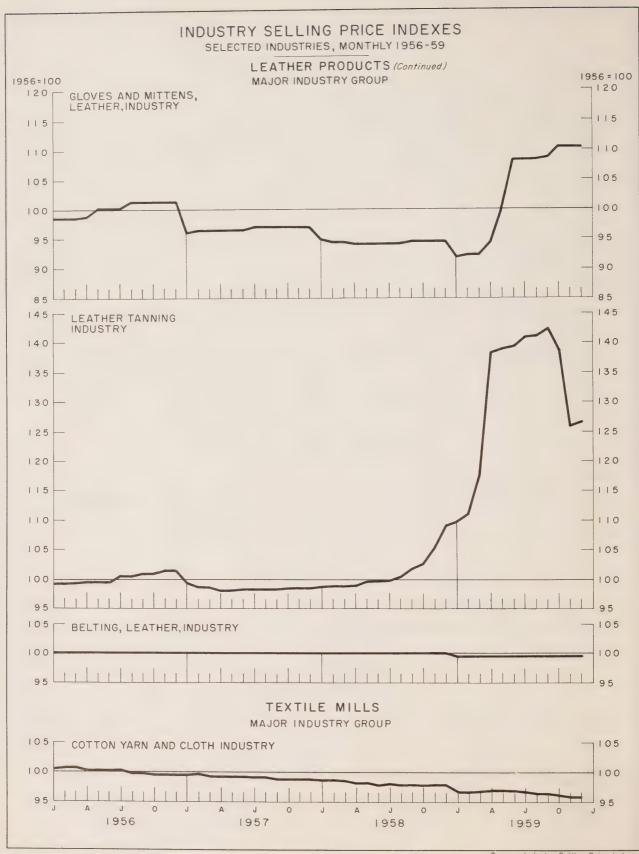

Ordinary methods of compilation are not practicable for "unique" goods. Classes of products for which repeat orders rarely, if ever, occur do not provide sufficient continuity of comparable price quotations. As a substitute for constructing indexes from price quotations "unique" goods are sometimes assumed to move with some other related priceable commodity. In other instances a model is set up which includes approximately the same proportions of materials and labour and other inputs as the "unique" goods. The respondent then supplies the prices he would charge for such a model from month to month and the resultant price series is ascribed to the "unique" goods concerned.

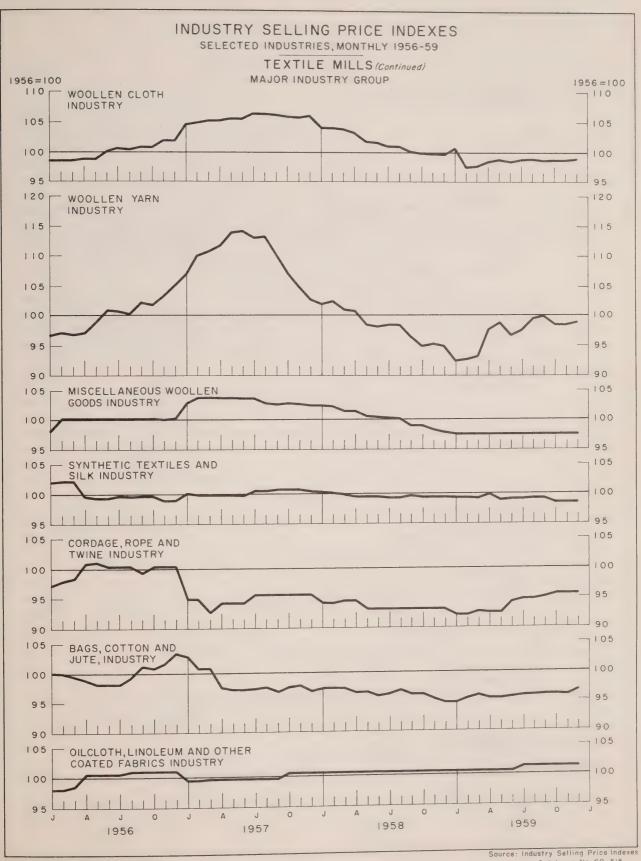

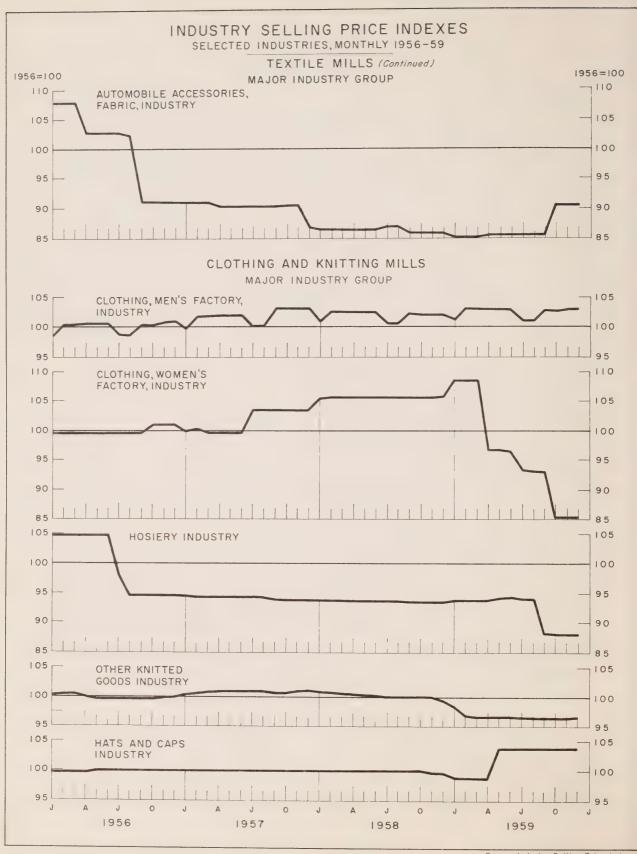

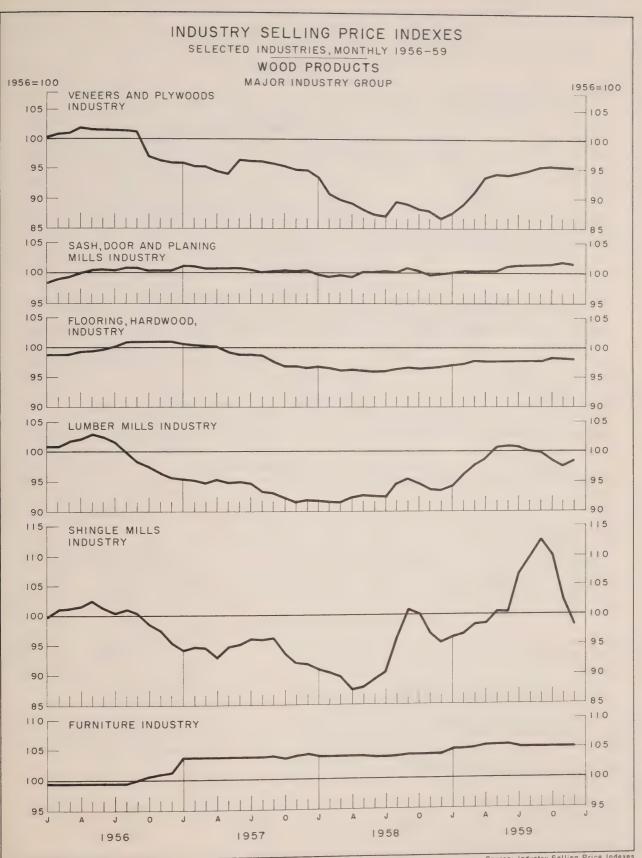

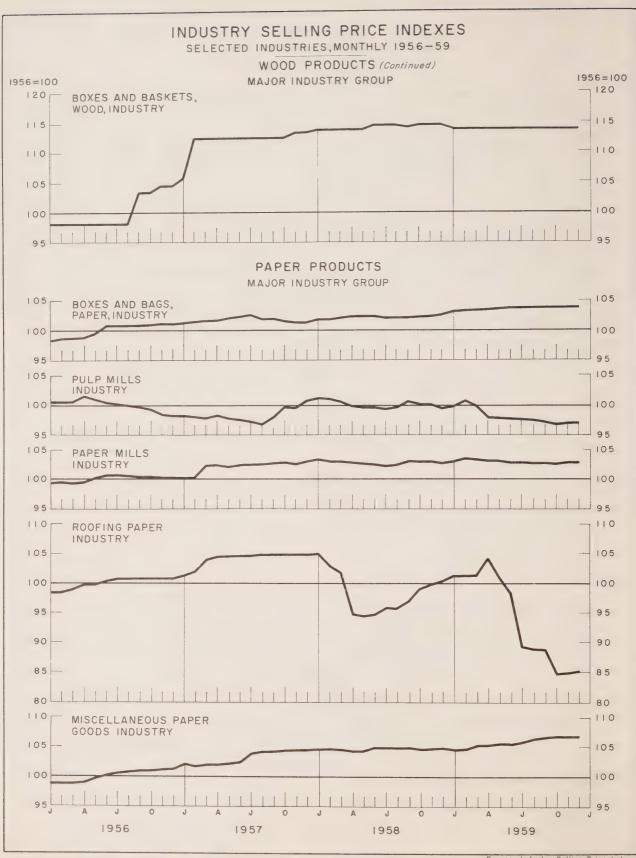

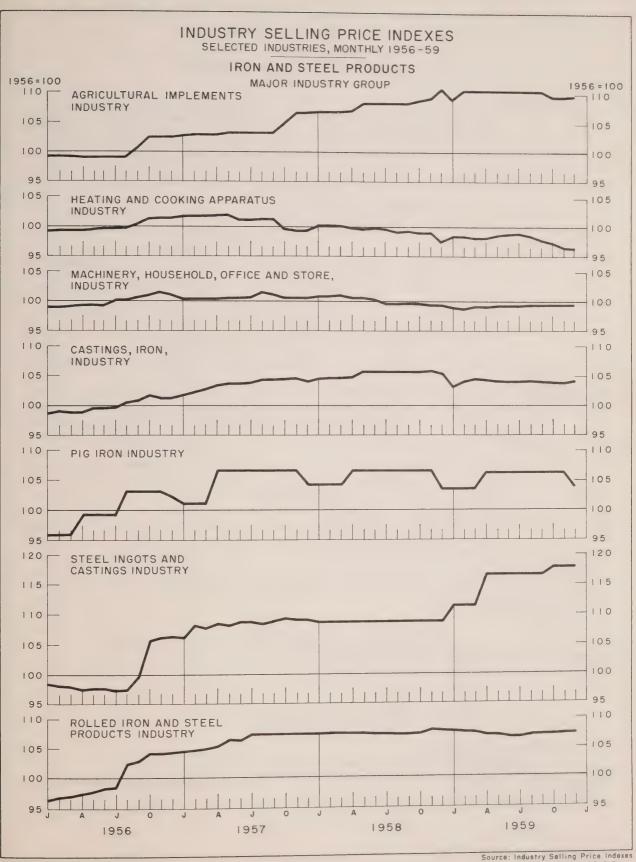

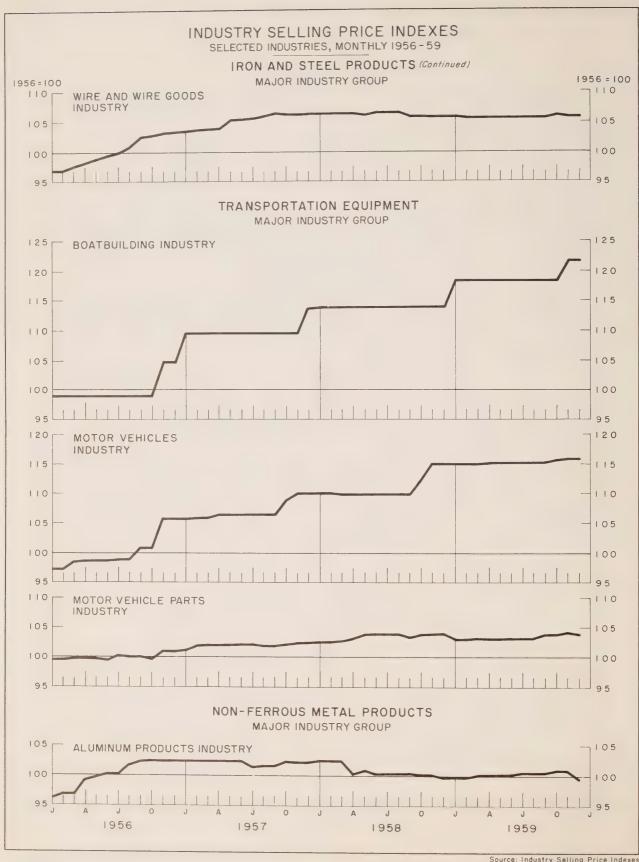

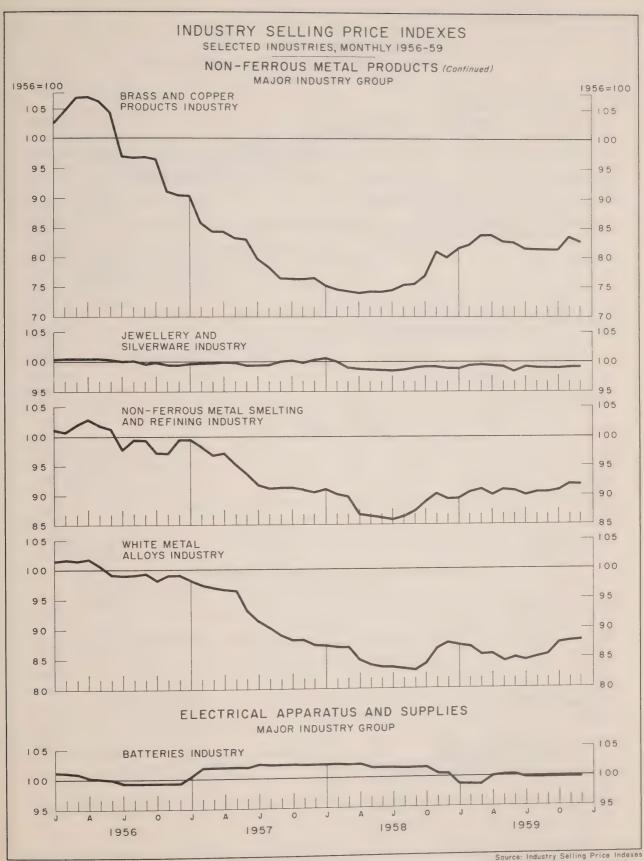

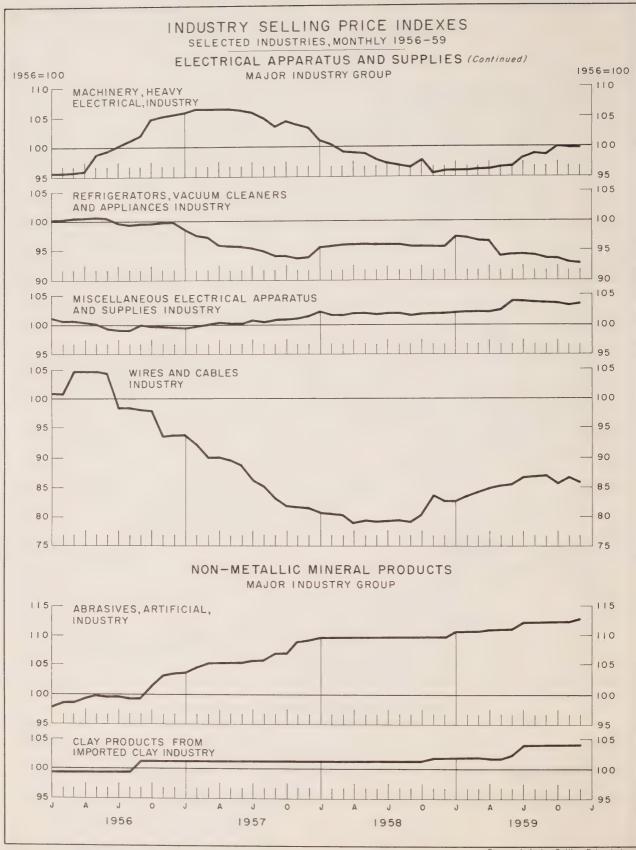

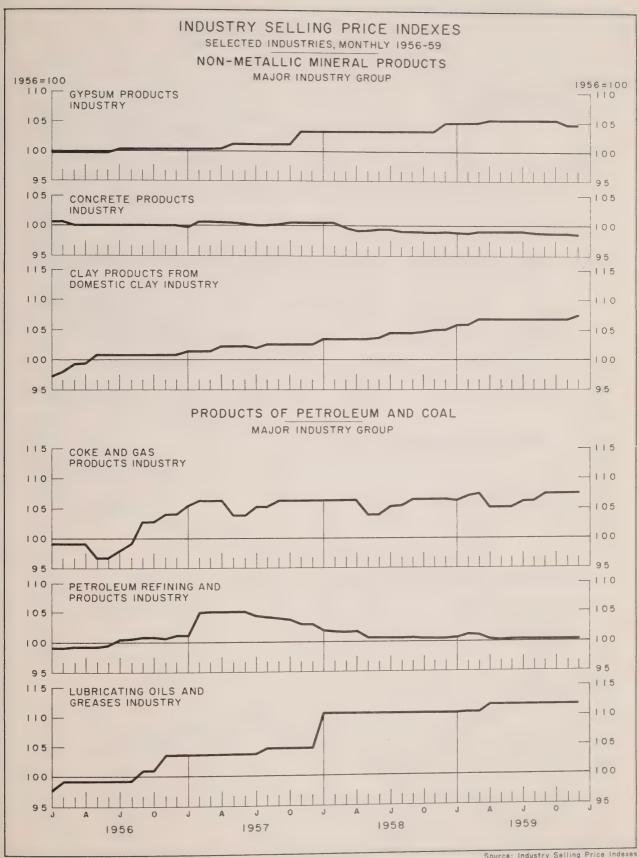

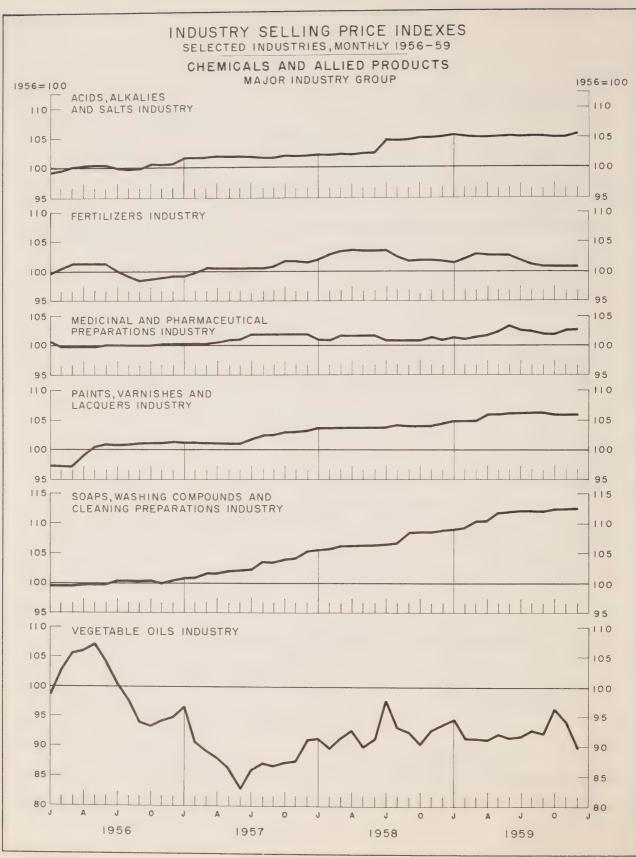

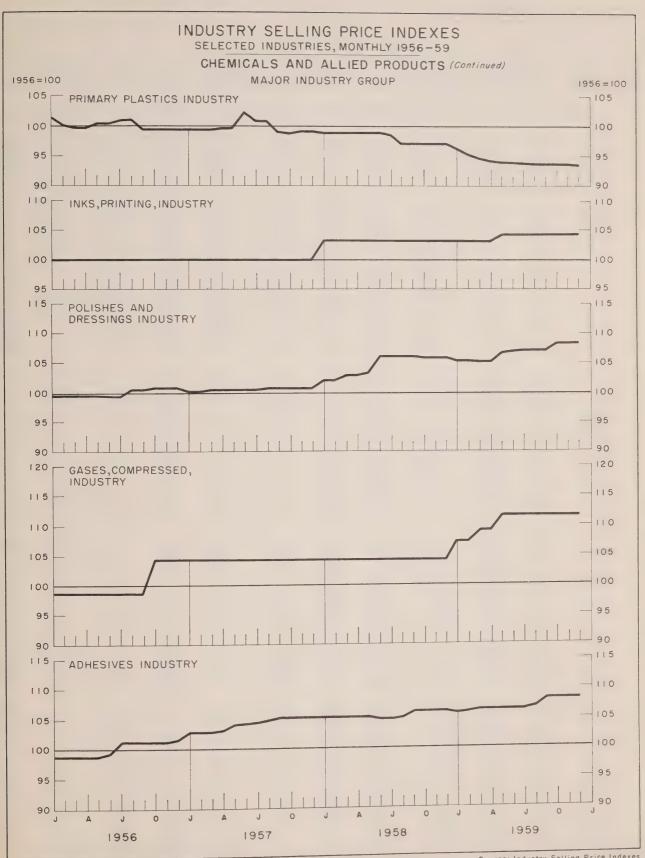

TABLE 1. Industry Selling Price Indexes, by Industry, by Months, 1956-59 (1956 = 100)

#### APPENDIX A

#### Base Period Weights of Industry Selling Price Indexes

(1956 = 100)

Industry and Commodity or Commodity Group	Commodity weight in industry	Industry weight in major industry group
	%	%
Foods and beverages major industry group		100.0
Meat products industry sub-group:		
Slaughtering and meat packing industry	100.0	21.7
Commodities:		
Bacon and sides	5.9 31.8	
Beef, fresh or frozen	8.8	
Hides, cattle	1.9 5.0	
Lard Margarine	4.8	
Meats, canned, all kinds	4.4 1.5	
Mutton and Lamb, fresh or frozen	20.5	
Poultry, fresh or frozen	2.2 4.5	
Sausage, fresh	3.9	
Weiners and bologna	4.8	
Dairy products industry sub-group:		
Concentrated milk products industry	100. 0	1.5
Commodities:  Milk, skim, powder, spray process	18.6	
Milk, whole, evaporated	70.1	
Milk, whole, powder, spray process	11.3	
Cheese, processed, industry	100. 0	0.8
Commodities: Cheese, processed, from cheddar only	100.0	
Cheese, processed, from cheddar only	100.0	
Dairy products, other, industry	100.0	0.4
Commodities: Ice cream, specialized industry	100.0	
	100.0	
Canning and processing industry sub-group:		
Fish processing industry	100. 0	3.9
Commodities: Cod, dried, salted	8.0	
Cod, fillets, frozen	8. 1	
Haddock, fillets, fresh or frozen	5.9 7.1	
Herring, canned, kippered, pickled, etc.	8.4	
Lobster, canned Lobster, shell	5.4 12.2	
Salmon, canned, pinks	15.2	
Salmon, canned, sockeye	19.7 10.0	
Fruit and vegetable preparations industry	100.0	5. 9
Commodities:		
Apples, canned	2.1	
Beans, baked, canned	8.7 4.2	
riuits, quick-irozen	4.4	
Infants food, prepared	9.5 13.1	
Peaches, canned	4.4	
Pears, Keiffer, canned	2.7	
rickles, leftsnes and sauces	8.2	
Soups, canned Tomatoes, canned	21.2	
Tomato juice, canned	9.8	

Industry and Commodity or Commodity Group	Commodity weight in industry	Industry weight in major industry group
	%	%
Foods and beverages major industry group — Continued:		
Grain mill products industry sub-group:		
Feed mills industry <sup>1</sup>	100, 0	5.7

In 1953, Feed mills S.I.C. 2130, included Stock and poultry feeds, prepared, S.I.C. 2160.

Composed of industries for which price coverage is inadequate to produce individual industry indexes.

In 1953, Cotton yarn and cloth S.I.C. 2520 included Miscellaneous cotton goods S.I.C. 2540.

In 1953, Clothing, men's factory, S.I.C. 2721 included Clothing contractors, men's, S.I.C. 2722.

In 1953, Clothing, women's factory, S.I.C. 2731 included Clothing contractors, women's, S.I.C. 2732.

In 1953, Miscellaneous paper goods, S.I.C. 2991 included Wallpaper, S.I.C. 2992.

In 1953, Abrasives, artificial, S.I.C. 3611 included Abrasive products, S.I.C. 3612.

In 1953, Clay products from domestic clay, S.I.C. 3692 included Brick and tile, S.I.C. 3642.

In 1953, Inks, printing S.I.C. 3894 included Inks, writing S.I.C. 3893.

#### APPENDIX B

## General Description of Commodities for which Prices are Included in Industry Selling Price Indexes Arranged according to Industries

#### Slaughtering and meat packing industry (S.I.C. 2001):

Beef carcasses: Cow, good Steer, good, grade "B" Steer, commercial, grade "C" Bologna Fowl, dressed, grade "A" Hides and skins: Beef, butcher and country trimmed Beef, packer, light native steers Calf, city cured Lamb carcasses Lard, processed Margarine Pork: Bacon, side, rindless Canned luncheon Cottage roll, smoked Ham, smoked Loin, fresh Picnics, smoked Sausage, pure pork

#### Concentrated milk products industry (S.I.C. 2030):

Milk, whole, evaporated Milk, skim, powder, spray process Milk, whole, powder, spray process

#### Cheese, processed, industry (S.I.C. 2070):

Cheese processed, from cheddar only

#### Dairy products, other, industry (S.I.C. 2090):

Ice cream, brick Ice cream, bulk

Shoulder, fresh

Veal carcasses

Weiners

#### Fish processing industry (S.I.C. 2100):

Cod, fresh and frozen fillets
Haddock, fresh and frozen fillets
Halibut, fresh and frozen dressed
Herring, kippered
Lobster, canned
Lobster, in shell
Salmon, canned, pinks
Salmon, canned, sockeye
Salmon, fresh and frozen

Cod, dried and salted

#### Fruit and vegetable preparations industry (S.I.C. 2120)

Fruits, canned:
Apples
Peaches
Pears
Fruits, frozen:
Cherries
Raspberries
Strawberries
Infants' food:
Canned fruits
Canned vegetables
Cereals, mixed
Jams:
Jam, plum
Jam, raspberry
Jam, strawberry

# Fruit and vegetable preparations industry (S.I.C. 2120) — Concluded:

Pickles
Relishes
Sauces
Soups, canned
Vegetables, canned:
Beans, baked
Corn
Peas
Tomatoes
Tomato juice

#### Feed mills industry<sup>1</sup> (S.I.C. 2130):

Cattle feeds:
Dairy mash
Dairy ration
Chopped grain feeds
Poultry feeds:
Growing mash
Hatching mash
Laying mash
Swine feeds:
Hog finisher
Pig grower
Pig starter

#### Flour mills industry (S.I.C. 2140):

Bran Flour, Ontario winter wheat Flour, Spring No. 1 Flour, Spring No. 2 Flour, Spring No. 3 Shorts and middlings

#### Breakfast foods industry (S.I.C. 2150):

Corn flakes Puffed wheat

#### Biscuits industry (S.I.C. 2180):

Biscuits, fancy Biscuits, plain Biscuits, soda

#### Bread and other bakery products industry (S.I.C. 2190):

Bread Buns, fruit Buns and rolls, plain Pies, cakes, cookies, pastries etc.

#### Carbonated beverages industry (S.I.C. 2200):

Soft drinks Syrups, concentrate

#### Distilled liquors industry (S.I.C. 2210):

Whiskey, Canadian rye

#### Breweries industry (S.I.C. 2220):

Beer, draught and bulk Beer, bottled small

#### Wines industry (S.I.C.) 2240)

Wine, bottled

#### Confectionery industry (S.I.C. 2250): Chewing gum Chocolate bars Chocolate confectionery, bulk Chocolate, packaged Sugar confectionery, bulk Sugar refining industry (S.I.C. 2270): Sugar, granulated, cane and beet Sugar, icing, cane and beet Sugar, yellow or brown Miscellaneous food preparations industry (S.I.C. 2281): Coffee, roasted Jelly powders Margarine Peanuts, roasted, salted Potato chips and flakes Tea, blended, packaged Macaroni and kindred products industry (S.I.C. 2283): Macaroni Spaghetti Malt and malt products industry (S.I.C. 2285): Malt, barley Tobacco, cigars and cigarettes industry (S.I.C. 2302): Cigarettes Cigars Tobacco, fine cut Rubber goods, including footwear, industry (S.I.C. 2390): Belting, rubber, conveyor Footwear: Boots, rubber Overshoes and galoshes, cloth uppers Overshoes and galoshes, all rubber Hose, rubber: Natural and synthetic for garden Synthetic for gasoline and oil Latex compounds: Adhesive Rug backing Upholstery Pillows and cushions, foam rubber Soling, rubber composition Soling and slabs, for heels Tape: Cellulose Electrical Friction Masking Tires: Balloon, bus and truck Balloon, passenger car, tubed type Implement Tubeless Tubes: Bus and truck Passenger cars Footwear, leather, industry (S.I.C. 2410): Moccasins, women's Babies' stitchdowns Boys' stitchdowns Children's stitchdowns Men's goodyear welts

Men's stitchdowns Misses' stitchdowns See footnote, page 73.

Woollen cloth industry (S.I.C. 2550):
   Blankets, wool
   Woven fabrics:
      Woollen suiting
     Wool, worsted suiting
Woollen yarn industry (S.I.C. 2570):
      Hand knitting, worsted, oil spun
     Machine knitting, worsted, dry spun
```

Machine knitting, worsted, oil spun Weaving, worsted, oil spun

Footwear, leather, industry (S.I.C. 2410) - Concluded:

Shoes - Concluded:

# Miscellaneous woollen goods industry (S.I.C. 2590):

Felts, wool, papermakers Wool, reworked and reprocessed

## Synthetic textiles and silk industry (S.I.C. 2600):

Blouse fabrics
Lingerie fabrics
Nylon fabric, woven continuous filament
Rayon fabrics:
Woven, continuous filament
Woven, spun
Woven, spun, and cotton mixture
Shirting fabrics
Yarn:
Nylon, singles
Nylon, thrown
Nylon tire cord
Spun rayon, blended
Spun rayon, carpet
Viscose rayon, tire cord

#### Cordage, rope and twine industry (S.I.C. 2650):

Rope:
Manilla
Sisal
Twine:
Baler
Binder
Sisal

#### Bags, cotton and jute, industry (S.I.C. 2660):

Bags, cotton Bags, jute

# Oilcloth, linoleum and other coated fabrics industry (S.I.C.

Coated fabrics
Floor covering:
Linoleum
Felt base, printed surface
Tiles, linoleum
Window shades, cloth blinds

#### Automobile accessories, fabric industry (S.I.C. 2691):

Seat covers, automobile

#### Clothing, men's factory, industry<sup>4</sup> (S.I.C. 2721):

Dungarees, sanforized drill denim Jackets, leather Overalls Overcoats Pants: All wool Cotton Rayon Pyjamas, cotton broadcloth Shirts: Dress, cotton broadcloth Dress, nylon tricot Cotton, work Sport jackets, all wool Sportshirts: Cotton Rayon Suits, all wool Swim trunks Top coats

#### Clothing, women's factory, industry<sup>5</sup> (S.I.C. 2731):

Blouses, cotton
Coats, wool
Dresses:
Cotton
Linen
Housedresses, cotton
Dusters, cotton
Nightgowns, rayon jersey
Skirts, all wool
Slips:
Nylon
Rayon

#### Hosiery industry (S.I.C. 2740):

Hosiery, ankle socks:
Nylon, children's
Nylon, women's
Hosiery, men's, seamless, fine socks:
Mixtures
Nylon
Orlon
Wool
Hosiery, men's, seamless, work socks, wool
Hosiery:
Nylon, ladies' full fashioned
Nylon, ladies' seamless

#### Other knitted goods industry (S.I.C. 2750):

Bathing suits, ladies' and girls'
Combinations:
Men's and boys', cotton or chiefly cotton
Men's wool
Glove and shoe linings, fleeced cotton
Knitted goods, infants'
Nylon fabric, knitted
Panties:
Women's and misses', cotton
Women's and misses', rayon
Stockinettes, cotton
Sweaters, pullovers
T-shirts, men's cotton
Undershirts, men's and boys', cotton or chiefly cotton

#### Hats and caps industry (S.I.C. 2780):

Caps, cloth, men's and boys' lined Hats, men's fur felt

#### Veneers and plywoods industry (S.I.C. 2810):

Doors:
Birch plywood, interior
Douglas fir plywood, interior
Plywood, Douglas fir
Plywood, yellow birch
Plywood panels, birch, for doors
Veneer, yellow birch

#### Sash, door and planing mills industry (S.I.C. 2831):

Door frames
Doors, wooden
Lumber, matched:
Red cedar
Red pine
Spruce, eastern
White pine, eastern
Lumber, planed:
Spruce
White pine
Mouldings, room and door trim
Sashes, window
Window units, cellar, pre-fit

### Flooring, hardwood, industry (S.I.C. 2832): Hardwood flooring, yellow birch Hardwood flooring, red oak Lumber mills industry (S.I.C. 2851): Lumber, sawn: Birch, yellow Cedar, red Fir, Douglas Hemlock, eastern and western Jack pine Maple, hard (sugar) Pine, white, eastern Spruce, eastern and western Timbers, Douglas fir, rough Shingle mills industry (S.I.C. 2852): Shingles, red cedar Furniture industry (S.I.C. 2861): Bed springs, box and slat Mattresses, spring filled Metal furniture: Cabinets, filing Chairs, office, beauty parlor Desks, office Tables, kitchen and dinette Wooden furniture: Bedroom suites Buffets Chesterfield suites Davenport suites Desks, office Dining room suites Tables, living room, various types Boxes and baskets, wood, industry (S.I.C. 2870): Boxes, wooden, butter, explosive etc. Boxes and bags, paper, industry (S.I.C. 2920): Bags, paper: Grocery, self opening, square Kraft sacks Laundry, flat Multi-wall, pasted, open mouth Other multi-wall, flour, feed etc. Shopping Bags, special: Cellophane Glassine Polyethylene multi-wall Waxed Boxes: Corrugated Set-up, various types Boxes and cartons, folding Cellophane wraps, printed Containers, round, fibre or paper board Drinking cups Milk bottles, paper Napkins, paper Pails, paper Paper, waxed bread wrappers, coloured Paper, waxed, in rolls Pulp mills industry (S.I.C. 2941): Pulp, bleached: Sulphate process Sulphite process, dissolving grade

#### Pulp, groundwood No. 1 Pulp, unbleached: Sulphate process Sulphite process, newsgrade Sulphite process, strong Paper mills industry (S.I.C. 2943): Book paper Building boards: Insulating Structural hard board Building paper, dry: Light and heavy Sheathings Fine paper, various types Newsprint paper: Rolls Sheets Paper board: Box board for folding cartons Container board liners Natural kraft liner Corrugating board Wallboard Wrapping papers, Kraft No. 1 Roofing paper industry (S.I.C. 2960): Building boards: Insulating panels Insulating panels, asphalt coated Building paper, sheathings, asphalt saturated Felts, tar and asphalt saturated Insulated siding Roofing Asphalt shingles Roll felt, mineral surface Roll felt, smooth surface Tile: Acoustic, ceiling Asphalt, floor Miscellaneous paper goods industry<sup>6</sup> (S.I.C. 2991): Bags: Paper, grocery, heavy Cellophane Polyethylene Books: Exercise Note Scribblers Envelopes Facial tissues Napkins: Paper Sanitary Paper: Blueprint Cigarette Clay coated and enamelled Dry sensitized (reproduction) Photostat Refills, for loose-leaf Toilet Towels Wallpaper, manufactured Wallboard, fibre, laminated type Wax paper, including bread wrappers Wrapping paper, printed, gift Wrappers, printed Wrappers, unprinted

Pulp mills industry (S.I.C. 2941) - Concluded:

Sulphite process, paper grade

#### Agricultural implements industry (S.I.C. 3110):

Combine:
Reaper-thresher
Self-propelled
Disc-harrow, one-way
Disc-plough
Drill:
Fertilizer
Grain
Grain and fertilizer combined
Harrower, 1 and 2 section
Hay baler, pick-up
Manure spreader
Plough-harrow, one-way
Swather
Windrower

#### Heating and cooking apparatus industry (S.I.C. 3180):

Furnaces, oil burning, forced air
Oil burner, power type, residential
Radiators, sheet metal
Refrigerators, electric, domestic
Stoves and ranges:
Coal and wood
Electric
Gas
Gas and oil combination

## Machinery, household, office and store, industry (S.I.C. 3190):

Accounting machines
Adding machines
Cash registers
Refrigerator, commercial, display cases
Sewing machines, electric
Typewriters:
Portable
Standard
Washing machines, electric, conventional

#### Castings, iron, industry (S.I.C. 3200):

Castings:
Grey iron, commercial
Malleable iron, commercial
Fire hydrants
Pipe and fittings:
Cast iron, soil
Cast iron, water
Malleable iron
Pipe, steel:
Buttweld and lapweld
Seamless
Tubing, light steel
Valves:
Brass, plumber's
Iron body

#### Pig iron industry (S.I.C. 3251):

Pig iron: Basic grade Foundry grade Malleable grade

#### Steel ingots and castings industry (S.I.C. 3252):

Castings, steel:
Basic, open hearth
Electric

#### Rolled iron and steel products industry (S.I.C. 3253):

Cold-rolled Concrete reinforcing Hot-rolled Blooms and billets, hot-rolled Plates: Carbon Universal Rails Rail fasteners and tie plates Shapes, structural steel: Heavy Light Sheets: Carbon, cold-rolled Carbon, hot-rolled Stainless, hot-rolled Skelp, carbon, hot-rolled Strips, stainless, cold-rolled Tinplate Wire rods

#### Wire and wire goods industry (S.I.C. 3270):

Chains, auto tire Screws: Steel, flat, machine Steel, tapping Springs: Mechanical Steel wire, upholstery Wire: Barbed Black, annealed Galvanized Plain Steel rope Steel twisted, strand Welded or woven mesh Steel, woven, farm fence Wire cloth, Fourdrinier Wire nails, iron and steel

#### Boatbuilding industry (S.I.C. 3330):

Boats, outboard

#### Motor vehicles industry (S.I.C. 3340):

Cars:
Passenger, hard-top
Passenger, 2-door sedan
Passenger, 4-door sedan
Passenger, station wagon
Coaches, transit type
Trucks:
5,000 lb. or less
5,001 to 10,000 lbs.
14,001 to 16,000 lbs.
16,001 to 19,500 lbs.
19,501 to 26,000 lbs.

#### Motor vehicle parts industry (S.I.C. 3350):

Axles, truck
Bodies and cabs:
Delivery trucks
Vans
Braking units:
Hydraulic
Power
Bumpers and bumperettes, passenger car
Differentials, passenger car

#### Motor vehicle parts industry (S.I.C. 3350) - Concluded:

Drive shafts, propeller, and universal joints Generators, automotive Heaters, car Headlights and parts Ignition coils Oil filters: Cartridges Elements Pistons Radiators:

Automobile
Truck
Shock absorbers
Spark plugs
Springs, leaf, passenger car
Starters, automotive
Steering gear assemblies
Trailers:
Cabin or house type
Commercial, van type
Transmissions:

#### Aluminum products industry (S.I.C. 3410):

Bars and rods Cooking utensils Extruded shapes Sheets Tubing

Passenger car

Small truck

#### Brass and copper products industry (S.I.C. 3420):

Castings, brass plumbing
Copper in rolls
Ingots, brass and bronze
Pipes, copper
Plates, bronze
Sheets, yellow brass
Sink and lavatory faucets and fittings
Strips, copper
Strips, yellow brass
Tubing, copper
Wire rods, copper
Valves, brass and bronze

#### Jewellery and silverware industry (S.I.C. 3430):

Cutlery and flatware:
Silver-plated
Sterling silver
Gold alloys
Hollow-ware, silver-plated
Sheet, sterling silver
Silver anodes, fine

# Non-ferrous metal smelting and refining industry (S.I.C. 3450):

Aluminum ingots
Copper, electrolytic
Gold bullion
Lead, electrolytic
Nickel cathodes, electrolytic
Platinum, refined
Silver bullion
Zinc, electrolytic

#### White metal alloys industry (S.I.C. 3470):

Alloys:
Brass and bronze ingots
Solders
Type and type metals

#### White metal alloys industry (S.I.C. 3470) - Concluded:

Die castings, zinc base alloys Lead: Antimonial Pig, made from scrap lead Pipe, pure Sheet, pure

#### Batteries industry (S.I.C. 3510):

Batteries: Flashlight Radio (non-portable) Storage, automotive

#### Machinery, heavy electrical, industry (S.I.C. 3520):

Generators, a-c. 1,000 kva. and under: Under 500 r.p.m. 500 r.p.m. and over Meters, watthour Motors, d-c: 5 Horsepower 250 Horsepower Motors, fractional a-c: 1/8 Horsepower 1/4 Horsepower 1/2 Horsepower Motors, integral a-c: 5 Horsepower 300 Horsepower 300 Horsepower, synchronous Starters: A.-c. full voltage magnetic Synchronous motor Switchboard, low voltage distribution Switches, enclosed, safety Switchgear: Metal clad units Outdoor disconnecting switches Power circuit breakers Transformers: Distribution

# Refrigerators, vacuum cleaners and appliances industry (S.I.C. 3570):

Floor polishers
Food mixers
Freezers, home and farm
Heating elements, for stoves and ranges
Irons
Refrigerators, household
Stoves and ranges
Toasters, automatic
Vacuum cleaners
Washing machines, conventional

# Miscellaneous electrical apparatus and supplies industry (S.I.C. 3590):

Boxes, switch and outlet Conduit, rigid iron Fixtures: Fluorescent lighting, commercial Incandescent lighting, residential Lamps:

Power, large

Power, small

Fluorescent Incandescent, miniature Incandescent, standard Pole line hardware Telephone materials

#### Wires and cables industry (S.I.C. 3592):

Aluminum and A.C.S.R. Aluminum, flexible, armoured

Asbestos insulated, all types Cambric insulated and braided, all types

Copper, copperweld, transmission

Non-metallic, sheathed

Paper-insulated, leaded covered, telephone Paper-insulated, leaded power

Paper-insulated, telephone Rubber-insulated and braided Rubber-insulated, leaded power

Cords, flexible, excluding telephone and switchboard

Wires:

Copper, solid, bare Magnet, enamelled

Rubber-insulated, telephone

Thermo-plastic, excluding telephone Weatherproof, all types

#### Abrasives, artificial, industry (S.I.C. 3611):

Abrasive wheels Aluminum oxide, fused, crude Silicon carbide, crude

#### Clay products from imported clay industry (S.I.C. 3641):

Insulators, electric, porcelain Lavatory combinations, viterous china

#### Gypsum products industry (S.I.C. 3662):

Gypsum:

Wallboard

Lath

Hardwall plasters

#### Concrete products industry (S.I.C. 3680):

Blocks:

Cinder

Gravel

Bricks

Concrete, ready-mix

Pipe:

Culvert

Sewer

#### Clay products from domestic clay industry<sup>8</sup> (S.I.C. 3692):

Brick:

Face, dry press Face, rough texture Face, solid smooth Face, stiff mud

Pipe, sewer, vitrified clay

Tile, structural, clay

#### Coke and gas products industry (S.I.C. 3731):

Coal tar, crude

Foundry

Metallurgical Stove

#### Petroleum refining and products industry (S.I.C. 3751):

Asphalt:

Hot-mix paving cement Roofing, packaged Solid, industrial Diesel fuel

Fuel oil: Bunker type Furance

Petroleum refining and products industry (S.I.C. 3751)-

Concluded:

Light industrial Stove

Gasoline:

Grade No. 1 Grade No. 2

Lubricating oil:

General purpose

Industrial

Motor oil

#### Lubricating oils and greases industry (S.I.C. 3752):

Lubricant, transmission and differential

#### Acids, alkalies and salts industry (S.I.C. 3800):

Acetic acid, glacial Acetic anhydride

Acetylene, carbon black, compressed

Aluminum fluoride

Aluminum sulphate

Ammonia, technical grade

Calcium carbide, lump

Calcium chloride, flake

Caustic soda

Chlorine, liquid

Cryolite, artificial

Dicyandiamide

Ethylene glycol, base blend

Soda ash, 58% light

Sodium cyanide

Sodium hydroxide

Sodium silicate, liquid

Sulphuric acid, 66°

Zinc oxide

#### Fertilizers industry (S.I.C. 3820):

Ammonia, anhydrous

Ammonium phosphate

Ammonium nitrate

Ammonium sulphate

Fertilizer, mixed: 2-12-10

2-16-6

5-10-10

5-10-13

Superphosphate

#### Medicinal and pharmaceutical preparations industry (S.I.C. 3830):

Anti-nausiants

Biologicals and vaccines

Hormones

Infant food

Patent medicines

Penicillin

Urinary preparations

Vitamin preparations

#### Paints, varnishes and lacquers industry (S.I.C. 3840):

Enamels, ready-mixed Lacquers Lacquer thinners Paints, latex base Paints, ready-mixed

Shellac, white, pure Varnish

# Soaps, washing compounds and cleaning preparations in-dustry (S.I.C. 3850):

Bleach, liquid Cleaning and scouring powder Dental cream Detergents: Solid synthetic organic Solid synthetic organic combined with alkaline deter-Glycerine, dynamite grade Shampoo, liquid and cream

Shaving cream

Chips and flakes Plain bar, laundry Powder Toilet, in bars

#### Vegetable oils industry (S.I.C. 3870):

Linseed oil, raw Linseed oilcake meal Soya bean oil, raw Soya bean oilcake meal Soya bean meal, extracted

#### Primary plastics industry (S.I.C. 3880):

Synthetic resins: Alkyd type Phenol-formaldehyde type Polystyrene type Polyvinyl chloride type

#### Inks, printing, industry<sup>9</sup> (S.I.C. 3894):

Ink printers: Letterpress Lithographing News, black News, coloured

#### Polishes and dressings industry (S.I.C. 3895):

Leather dressings: Edge and heel blackings Polish Spray finish Stains Wax: Paste Self-polishing

#### Gases, compressed, industry (S.I.C. 3897):

Acetylene, in cylinders Carbon dioxide, in cylinders Carbon dioxide, solid Oxygen, in cylinders

#### Adhesives industry (S.I.C. 3898):

Adhesives: Case sealing Envelope Gummed tape Glue: Bone and hide Synthetic resin, liquid Vegetable, liquid

#### Typewriter supplies industry (S.I.C. 3941):

Carbon paper

#### Fountain pens and pencils industry (S.I.C. 3942):

Pencils, black lead Pens, fountain

#### Clocks, watches and watch cases industry (S.I.C. 3952):

Clocks, spring alarm Wrist watches

#### Buttons, buckles and fasteners industry (S.I.C. 3981):

Slide fasteners

#### Candles industry (S.I.C. 3982):

Candles, beeswax Candles, votive lights

# Pipes, lighters and smokers' supplies industry (S.I.C. 3993):

Cigarette lighters: Automotive Pocket Table

See footnote, page

#### APPENDIX C

1. - Reproduction of Form Used to Collect Monthly Price Quotations. 1

# DOMINION BUREAU OF STATISTICS

OTTAWA - CANADA

CONFIDENTIAL

Attention:

\_\_\_\_\_\_\_ In reply please quote Reference No.

Dear Sirs:

Thank you for your previous kind co-operation in supplying wholesale price information.

Will you please report comparable price quotations for the current month, on the reverse side of this letter. In this connection, please report prices that refer to orders taken on the 15th of each month. If no orders were taken on any particular 15th for an item listed, use the price that applied to orders taken on the nearest earlier date. If a commodity is discontinued, please suggest a comparable replacement, giving complete "Product Descriptions and Terms of Sale", and the corresponding price quotation.

Any comment on the causes of price change will be very helpful; you may use the space below for this purpose.

Your continued co-operation is appreciated.

Yours very truly,

K. D. Wallace, Chief, Wholesale Prices Section, PRICES DIVISION.

Space for specification revisions and comments

<sup>&</sup>lt;sup>1</sup> This schedule was introduced in 1961 and incorporates some revisions to its fore-runner.

# DOMINION BUREAU OF STATISTICS

OTTAWA - CANADA

\*\*\*\*\*\*

Attention:

Dear Sirs:

It has come to our attention that you have recently modified the specifications of one of the commodities on which you have been reporting prices to us. Thus the continuity of this series of prices has been broken and to restore it, we require some information to serve as a basis for estimating a price equivalent of the new item if it had been sold competitively with its predecessor.

Accordingly, we ask you to please report your DIRECT COST OF LABOUR AND MATERIALS for the two versions of the product under discussion. We prefer precise figures, but if you do not keep such records, carefully considered estimates will be satisfactory. A form for your use is contained on the reverse side of this letter.

We ask you to continue your kind co-operation by making your return within the next two weeks.

Yours very truly,

K. D. Wallace,

Chief,

Wholesale Prices Section,

PRICES DIVISION.

# MOST CONFIDENTIAL - Dominion Bureau of Statistics - Wholesale Prices Section

#### PRODUCTION COSTS DATA

Section A:	(1) In the month of you reported a price of for your product described as:	\$
	(2) In the month of you reported a price of for your product described as:	\$
Section B:	What was the total direct labour and materials cost per unit for:	
	(1) The discontinued product, that is the one mentioned in Section A(1) above, in the month of	\$
	(2) The new product, that is the one mentioned in Section A(2) above, in the month of	\$
Section C:	What was the total direct labour and materials cost per unit for components:	
	(1) Which were contained in the discontinued product but which are NOT retained in the new product	\$
	(2) Which are contained in the new product but which were NOT contained in the discontinued product	\$
Section D:	What was the total direct labour and materials cost per unit for components common to both products (that is the parts of the discontinued product which were unchanged and retained in the new product):	
	(1) In the month of	\$
	(2) In the month of	\$
	Note: If no change in costs occurred for reasons other than those reported on in Section C the answers to D(1) and D(2) will be the same.	
Section E:	(1) Were there technological innovations involving the use of different machinery or processes in the new product which were not employed in the discontinued product?	Yes No
	(2) Did these innovations change the man-hours or skill of labour required to produce the components common to both products?	Yes No
	(3) If "Yes" to (2) above by what per cent would this factor alone have affected the costs entered in Section D(1).	(specify plus (+) or minus (-)
